

EASE Press release

We are pleased to announce the start of a new Erasmus+ project, EASE, in which Solution (France) is the coordinator. The project will have a duration of 24 months and its activities will be carried out by six partners from five countries (France, Ireland, Spain, Romania, and Poland). The partners kicked off the project during an online meeting in January, but they only met face-to-face on the 22/04/2022. Together, they will develop resources for foreign language teachers in 6 languages: French, English, Spanish, Romanian, German, and Polish.

The overall aim of the project is to improve the effectiveness of adult education in a foreign language by applying an emotionally-intelligent approach to teaching speaking skills. Since, a positive correlation between high emotional-intelligence and oral communication in a foreign language has been proved, the project will incite teachers to get to know those techniques. Foreign language educators could then utilise the benefits of social and emotional learning to enhance their students' speaking skills. EASE will thus attempt to create materials that are practical, accessible, and substantial to fill the gap in EI-related language teaching tools with a focus on oral communications.

The objective of EASE is then to promote and implement an innovative approach in teaching speaking skills in a foreign language by using research-backed techniques. The project will search to increase adult learners' communicative competences in a foreign language by encouraging self-directed learning and reflective thinking using an innovative digital platform.
